

DEHNacademy

More knowledge for safe working

In addition to technical protection measures, it is essential and obligatory for a company to regularly train its employees. With its online seminars and training sessions attended in person, DEHN offers extensive opportunities for expanding knowledge. Further services supplement the content on offer.

Your benefits at a glance:

Flexible. Choose between online seminars or intensive day events, depending on your schedule and level of knowledge.

Practical. Draw on the expert knowledge of our specialised DEHN instructors.

Increase awareness. Focus on safe working at electrical systems with more knowledge about arc fault protection.

Develop a wealth of experience. Expand your knowledge through interactions with managers from other companies.

The easy way to more knowledge

Online inspiration for your everyday work

Our free alternating online seminars support you in assessing the hazards in your electrical installations, taking suitable protective measures and applying them in compliance with regulations.

Intensive learning about arc fault protection

Risks when working on electrical systems, risk assessment and working methods – these and other topics are the focus of our full-day seminar. The seminar is aimed at safety specialists, electrical managers and electrical specialists with switching authorisation.

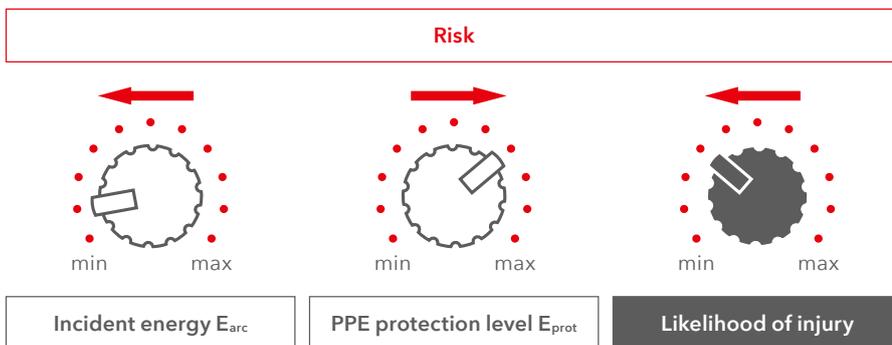

Raise awareness of company-specific hazards

Broaden the knowledge of your employees in everyday practice with on-site training courses that are specifically tailored to your electrical systems.

Raise awareness of the dangers posed by electricity

You can reduce the risk of accidents by increasing the knowledge of your employees through further education and training. This way, managers are always up to date with the latest technology. Through practical learning components and demonstrations in the laboratory, they are made aware of potential arc-fault hazards and will act more cautiously.

How often do your employees take part in training?
