

Customised products

for lightning protection and earthing products

The constantly changing materials and methods used in the building industry require individual solutions of e.g. holder systems or clamps for lightning protection and earth-termination systems. To be able to respond to the changing installation situations, we quickly and effectively offer customised products in the well-proven DEHN quality.

Examples of customised products

- Air-termination rods with special lengths or for higher wind loads
- Components for increased corrosion requirements
- Clamps and holders for different cross-sections and special shapes
- Equipotential bonding bars with more terminals or for higher short-circuit currents
- Bridging cables and braids of different lengths and cross-sections
- Various accessories (e.g. hammer inserts for earth rods)

SPANNgrip conductor holder for ridge tiles with increased span width

Tripod for use as wall-mounted two-legged stand

Enquiry for customised products:

The following information is required for efficiently processing your enquiry:

- Detailed description of the desired product or product modification
- Information on special basic parameters (e.g. wind load, corrosion requirements, installation options....)
- Quantity and desired date

Please fill in your contact data and the above information in the form on the reverse side.

Please send your enquiries to your DEHN account manager or to:
