Sustainable and safe - DEHN at Light + Building 2022

Smart technological solutions for residential and functional buildings, and networked systems in infrastructure and industry, are currently the state of the art. Maximum availability is a prerequisite here. Malfunctions with unscheduled downtimes can quickly cause significant additional work associated with extremely high costs. The reliability and protection of sensitive systems is therefore of the highest priority. Comprehensive lightning and surge protection is an essential component in rendering installations and systems safer and more reliable, and thus more efficient. At this year's Light + Building, from 2 to 6 October, DEHN is presenting pioneering protection solutions for a wide variety of fields – be it for residential buildings, industrial buildings, data centres or e-mobility.

"In the coming years, it will become ever more important not only to plan and construct new buildings to be future-proof, but in particular to render existing buildings and systems more efficient. If we want maximum availability of our systems and installations, solutions and products from lightning and surge protection and safety equipment are indispensable. We can't wait to meet and chat with everybody at Light + Building 2022", says Helmut Pusch, CSO of DEHN SE.

At the trade fair, various DEHN experts are presenting numerous application possibilities from the lightning and surge protection specialists based in Neumarkt. Whether it is for the protection of the intelligent use, generation and distribution of electricity, modern earthing concepts or the protection of charging infrastructure for electric mobility: DEHN will provide insights into the latest product innovations and, in addition to the tried-and-tested offerings, such as the DEHNshield ZP range, is presenting a new DEHNguard, new earthing kits, the new DEHNpatch, and novelties relating to protection against arc faults.

New developments in all areas require consistent and comprehensive safety concepts – from earthing to external lightning protection and equipotential bonding to surge protection and protection for the safe handling of electrical energy. Whether it is modern workplaces, offices or commercial buildings: to be able to function properly, they require reliably functioning technical components. They need to be safeguarded against failure. Lightning and surge protection, as well as the protection of people and systems, are important components for ensuring that systems and processes are always available.

Press release

To create value-added for planning engineers, installers and operators, DEHN opts for extensive tools that help with everyday work. In addition to comprehensive consulting by our support team, DEHN helps with pioneering planning tools and configurators. Furthermore, DEHN offers a comprehensive training programme with, for example, training formats for planning engineers, electricians and lightning protection installers – both online and offline – via e-learning or seminars on site.

You will find DEHN's booth at stand B90 in hall 12.

About DEHN SE

DEHN is a leading, international family-owned electrical engineering company based in Neumarkt, Germany. With its comprehensive portfolio, DEHN addresses the megatrends of our time - from e-mobility and renewables to the protection of critical infrastructure. The company offers solutions and services for lightning and surge protection as well as safety equipment – fields in which, with more than 1,100 patents, DEHN is a leading innovator. The company's products protect people and buildings, systems and telecommunications technology, process industry, as well as photovoltaic systems and wind turbines.

With more than 2,200 employees worldwide, DEHNgroup achieved revenue of around 385 million euros in the fiscal year 2021/2022. Alongside more than 110 years of experience, this constant growth is based on the highest quality standards and a consistent orientation towards customers and markets worldwide.
