Greater manufacturing capacity for European markets: DEHN breaks ground for production in Romania

Global electrification is the main driver of business for the family-owned company DEHN. The expansion of renewable energies, the growing share of electric vehicles, the necessary infrastructure, data centres and much more require products and solutions from the specialist for lightning protection, surge protection and safety equipment. The new production site in Pitești, Romania, expands capacities for customers in Europe. The plant fits seamlessly into the company's existing global production network. "Pitești gives us the flexibility we need to supply our customers in Europe even better," says Dr Philipp Dehn, CEO DEHN SE. "The plant underscores our internationalisation efforts and creates future-proof jobs in the greater Bucharest area."

To meet the anticipated global market demand, the company recently opened additional production sites in [Mühlhausen](#) (Germany) and [Mooresville](#) (North Carolina, USA). As the existing capacities in Germany will soon reach their limits, DEHN is now pushing ahead with the construction of an additional production facility for the European markets. After an intensive search for a location, during which several cities and regions throughout Europe were evaluated, the decision fell in favour of Pitești, located north-west of the Romanian capital Bucharest. The combination of a well-trained workforce, very good local conditions and sufficient space for the construction project were the key arguments in favour of the new site in the [CTPark Pitești](#).

DEHN plans to invest around 10 million euros in this Eastern European plant over the coming years. While the production sites in Neumarkt and Mühlhausen will primarily focus on high-volume products and highly automated processes in future, the focus in Romania will be on customised surge protection products in smaller quantities that require a high level of manual production.

The ground-breaking ceremony marks the start of an approximately 10-month construction phase. Start of production with up to 150 employees is scheduled for mid-2026.

About DEHN SE

DEHN is a leading, international family-owned electrical engineering company based in Neumarkt, Germany. With its comprehensive portfolio, DEHN addresses the megatrends of our time - from e-mobility and renewables to the protection of critical infrastructure. The company offers solutions and services for lightning and surge protection as well as safety equipment – fields in which, with more than 900 patents and utility models, DEHN is a leading innovator. The company's products protect people and buildings, systems and telecommunications technology, process industry, as well as photovoltaic systems and wind turbines.

With more than 2,500 employees worldwide, DEHN achieved revenue of around 470 million euros in the fiscal year 2023/2024. Alongside more than 115 years of experience, this constant growth is based on the highest quality standards and a consistent orientation towards customers and markets worldwide.
